

Eaton-Williams Service – M&E Services

Air Conditioning, Mechanical & Electrical Specialists

Controlled Environments from M&E Services

EWS – M&E Services designs, installs, and commissions air conditioning, heat recovery, together with heating & ventilation systems, throughout the UK. Established in 1990, the company's headquarters are based in Edenbridge, Kent, with a satellite operation located in Stoke-upon-Trent, Staffordshire. The company has grown in turnover and reputation over the last 15 years, achieving the recognition in the industry of being a leading M&E Services operator.

The complete service

HVAC systems maintain the comfort and safety of personnel, whilst ensuring the optimum lifetime for buildings. By choosing professional and specialist engineering support from EWS – M&E Services, clients can be sure that their investment and ownership costs continues to provide reliability, combined with long term value for money.

EWS – M&E Services provide one of the finest and most comprehensive contracting packages available. The company uses many of the world's most respected equipment manufacturers, and is a member of the Heating and Ventilating Contractor's Association (HVCA).

The company fully complies with refrigerant safe handling and recovery practices under the Environmental Protection Act. Ozone depleting refrigerants are recycled or disposed of in an environmentally safe manner utilising our own refrigerant reclaim machinery.

Air conditioning

With the choice from leading equipment manufacturers coupled with many years of experience, EWS – M&E Services are able to deliver the right solution – whether it be a straightforward heating or comfort cooling installation, or a close control environment required within a Telecommunications site, laboratories or clean room projects.

The range can include VRF (Variable Refrigerant Flow systems), air and water cooled split systems, ducted units, rooftop packaged units and chilled water systems. Our systems are being successfully used within the commercial, industrial, agricultural, educational, retail and leisure industries, and local government throughout the UK.

Heating & Ventilation

EWS – M&E Services will always provide the appropriate and energy efficient equipment solution guaranteed to perform to your specification. Low pressure hot water heating, fresh air supply systems, warm air heating and process extract systems are among the many options available to the client.

Heat Recovery

As energy costs are likely to rise with the introduction of a carbon tax, heat reclaim projects have become a priority. As a Company we have always promoted energy saving designs for projects that we have been involved on, achieving a high level of performance for the systems installed.

We can select heat pump equipment from a wide choice of manufacturers, again providing a system exactly suitable for the particular site location.

Electrical

All the electrical requirements for your project from feasibility, design specification, installation and testing of the following can be provided.

- Moving or adding floor boxes
- Modification of existing and installation of new power supplies
- Modification of existing and installation of new lighting services
- Inspection and testing
- Portable appliance testing
- Fire alarm systems

Special Projects

Our skilled engineers and designers have a wealth of experience in the HVAC industry. We have invested in the latest information technology to ensure that your project is delivered on time, to specification, and within budget.

Our designers will select the most appropriate equipment for your installation, whether for a large or small project. They will expedite and

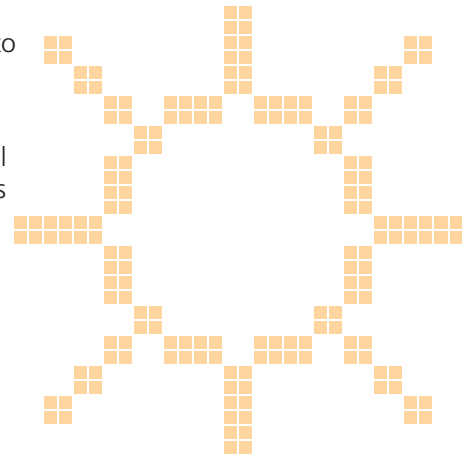

control all aspects of the contract, structuring the project to fully satisfy the clients needs throughout the life of the contract.

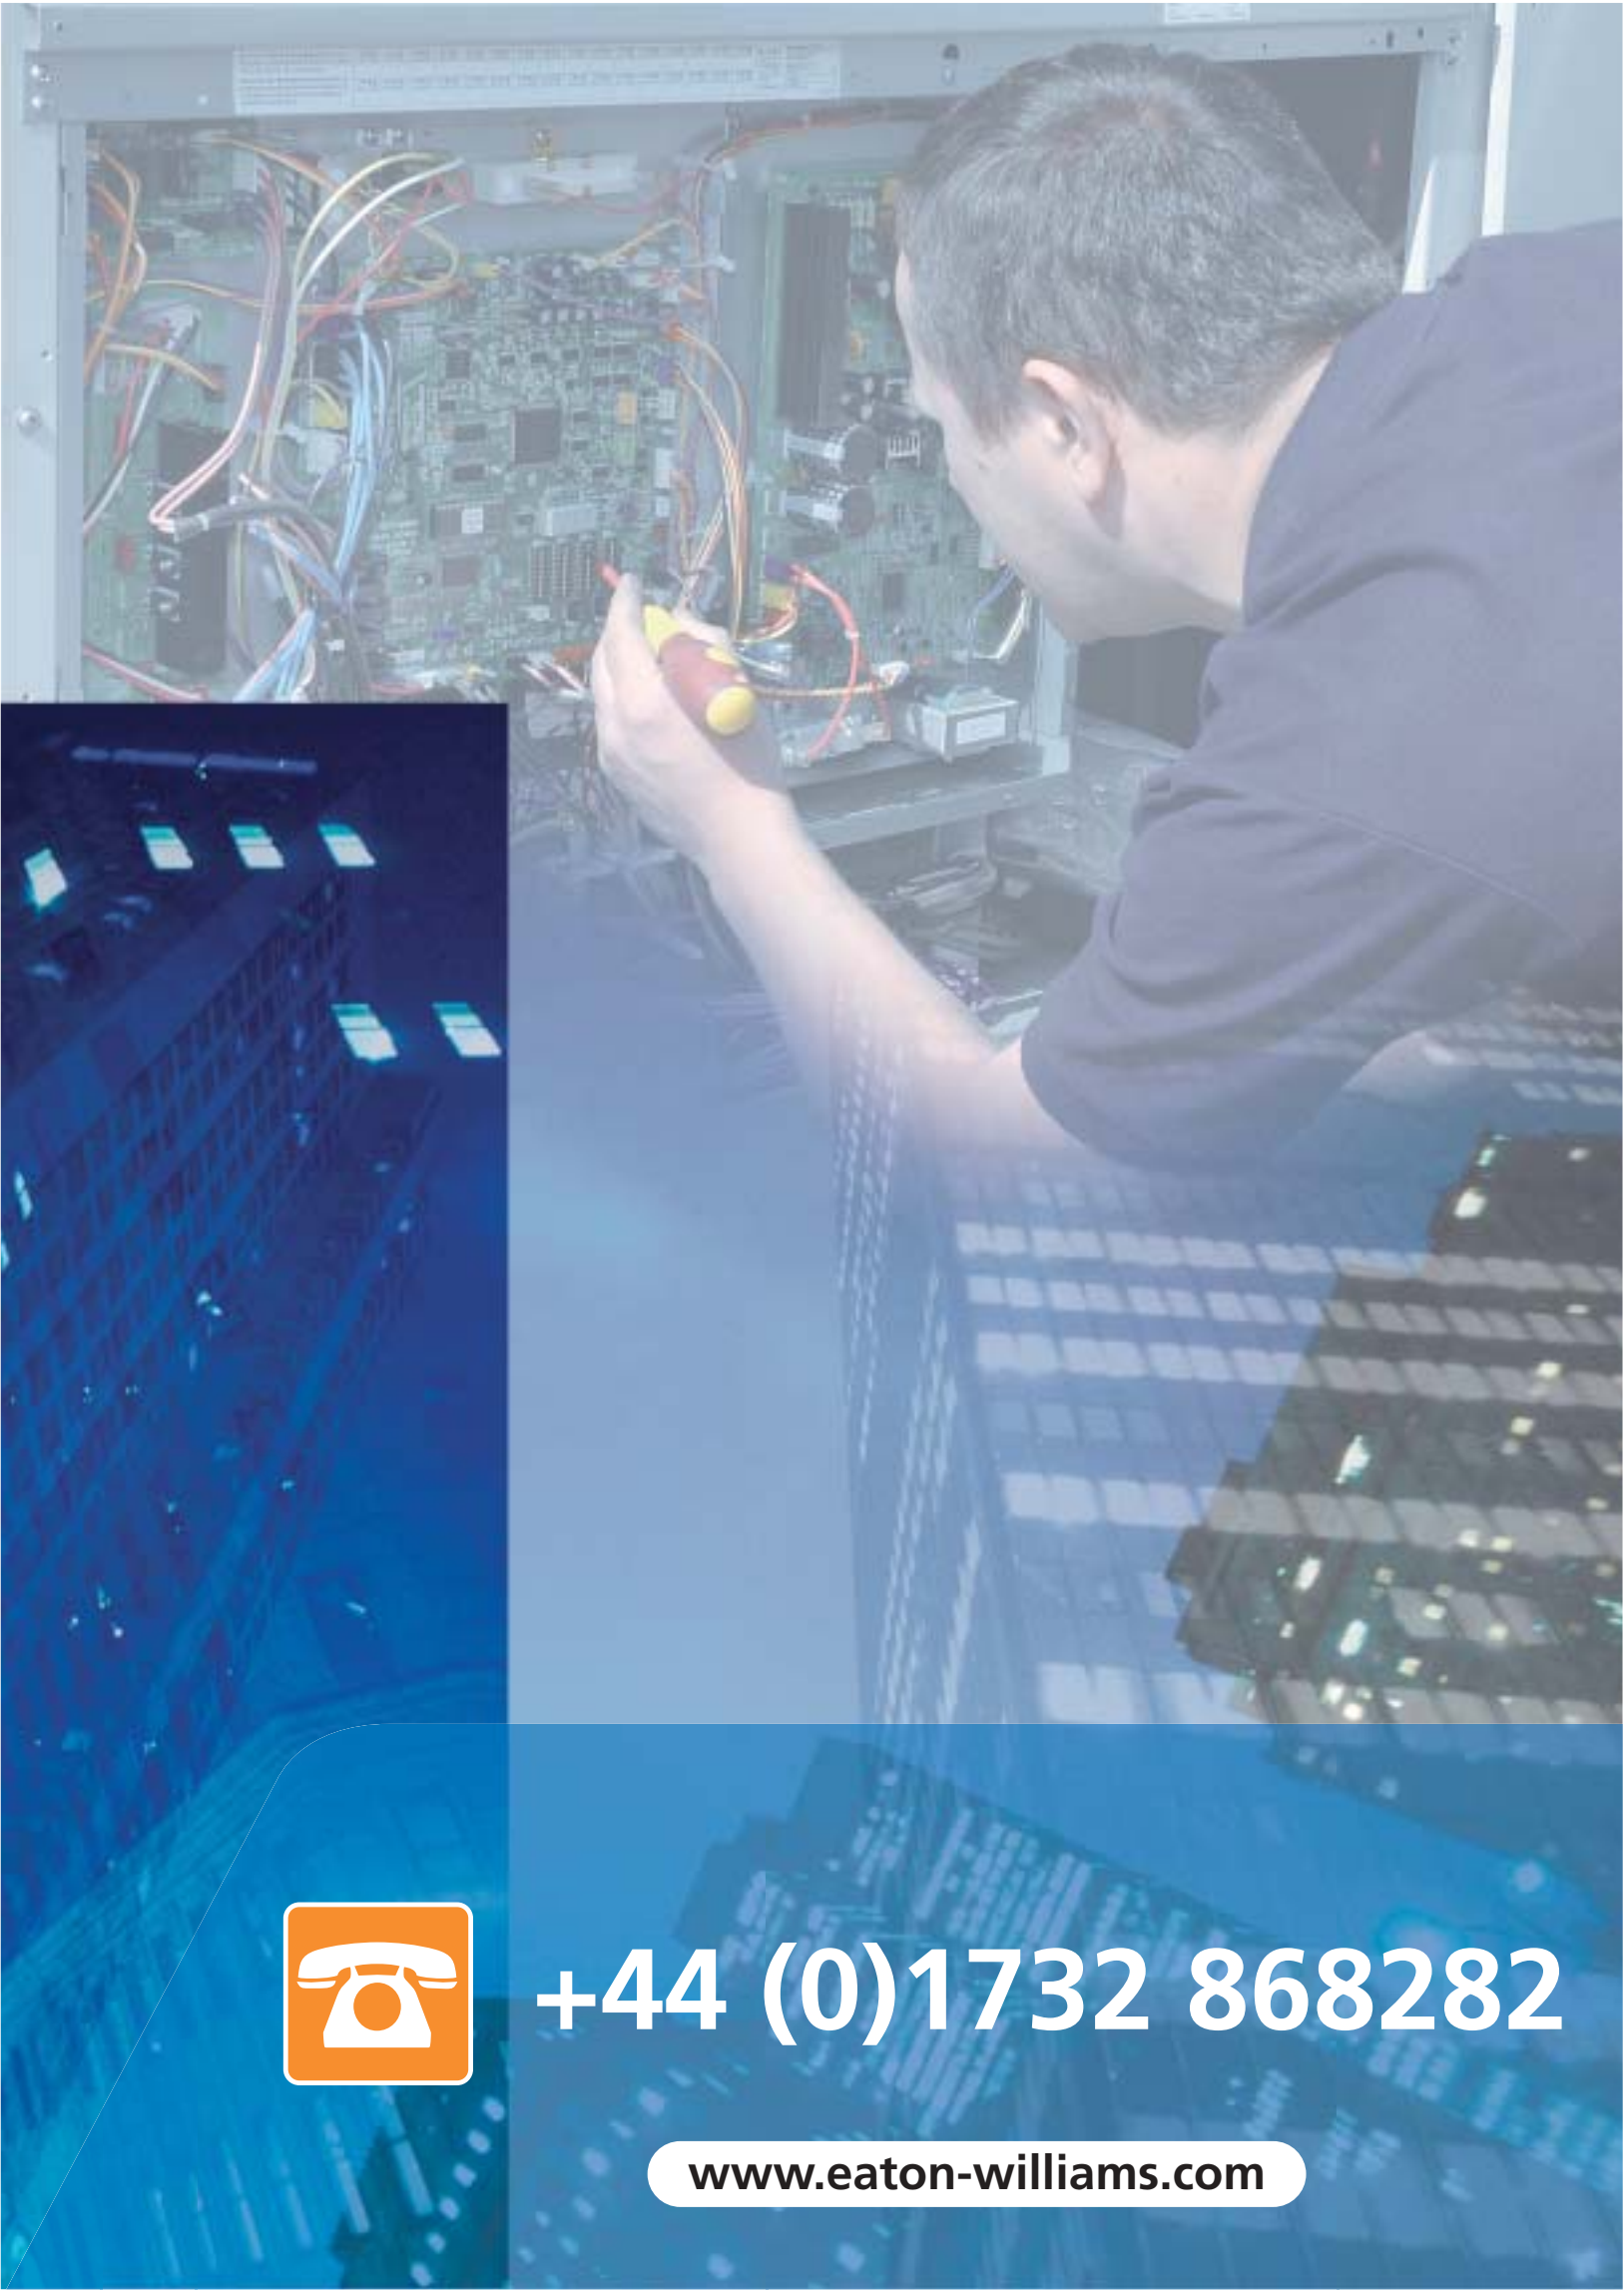

Refurbishment & Repairs

EWS – M&E Services will be pleased to undertake a comprehensive site survey and produce a detailed written report on the condition of existing systems and plant. This service is available on all types and

makes of equipment and can be carried out in most cases during normal office hours to avoid any disruption to our customers operations.

We will expedite and control all aspects of plant upgrades and refurbishment projects, being supported by our design engineers who are happy to advise regarding the most suitable and cost effective solution to your problem.
